

IF YOU ENJOY MATH AND SCIENCES...

Professional Engineer

BLM Civil and Petroleum Engineers work with professionals from many disciplines to design and construct projects that further agency objectives. Some of these projects might include: water pipelines, spring developments, roads and trails, bridges, fences and cattleguards, well drilling and equipping, outhouses and recreation sites, small reservoirs, and erosion-control structures. An engineer works on all aspects of the project, including survey, layout, and design; contract preparation; construction inspection or supervision; and maintenance.
